

Meeting Minutes

8:45PM February 7th, 2016

Present

Darvin (notetaker)

Corey

- Reviewed requirements doc
- Notes:
 - Consider a server use case diagram
 - Actors for authenticator(maybe) and interface
 - Consider adding in more storyboards, such as a login page
 - make a cleaner rendition of the storyboard with markers to direct the flow of the description
 - More sections (instead of color - have a tools option that encompasses colors, font, etc)
 - Added in a bit more description to the storyboards
- Reviewed requirements doc
- Notes:
 - Talk about why the decision matrix was laid out in such a way and why each architecture was scored in such a way
 - Split architecture into three section for each layer of the 3-tier architecture and talk about the individual elements in each
 - Consider a concurrent design pattern as well
 - Changes are needed and there should be more sequence diagrams
 - perhaps think about the version control, types of testing, and whatnot to add to the documents
 - Please see other notes in the documents
