Meeting, January 20th 2016

List of Things to Request (Requirements)
- Issue Tracking: Redmine/Track
- Wiki Page: GitLab
- Continuous Integration: Git hooks
- Smoke Test: Automated testing (sets of testing, regression, assertions)
- Status Reporting Mechanisms: Changelog (Pushing it to Git)
- Template for commit messages
- Tools
    - Databases
        - OT Framework/API
            - Usually written in js
                - What will work well with OT?
        - PostgreSQL
            - Can communicate well with js
        - Deployment Database
        - Testing Database
    - Front end
        - HTML/CSS
        - Other front end frameworks
    - Node.js
    - Logging
    - Organization
        - Trello
    - Persistence
        - PHP
            - Or Ruby?
                - Something new
                - A possible risks
                - In reality none of us know either PHP or Ruby except one person so it might be a moot point to do PHP or Ruby.
            - PHP is slowly becoming outdated becoming a "meal ticket stuck in the 80's and 90's"
            - It's good to learn PHP though

Should we Shuffle the Teams into Different Positions?
- Yes
    - It helps gives people new experience in different fields
- No
    - It might get people used to the field they are in confused in the new field they get put into.

Languages Familiar to People

- See spreadsheet

<u>People in Attendance</u>
Everyone except for Connor
